1. Claims 2, 9, 13, 20, 24 and 31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

These claims are confusing because they list trifunctional components, whereas, the independent claims are limited to diisocyanates and saturated diols. It isn't understood how trifunctional components can be listed as example of difunctional components.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wu in view of Szycher.

4. Wu discloses golf ball covers comprising polyurethanes made from dicyclohexylmethane diisocyanate (claim 6), polytetramethylene ether glycol (his preferred polyol in the examples), the aromatic diol bis (hydroxyethoxy benzene (his preferred aromatic diol of the examples) and butane diol (col. 4, line 4). He differs from the claims by listing the aliphatic diisocyanate among a list of seven diisocyanates. He differs from some claims by not disclosing trimethylolpropane as an ingredient, and by not requiring the presence of a saturated diol as well as the aromatic diol.

5. Szycher discloses that the inclusion of small amounts of trimethylolpropane in polyurethanes increases resistance to abrasion (col. 4, lines 36-50).

Art Unit: 1711

6. It would have been obvious to one of ordinary skill in the art at the time the invention was made to choose the aliphatic diisocyanates of Wu because it's well known in the art that polyurethanes made from aliphatic polyisocyanates don't yellow upon exposure to sunlight the way that those made from aromatic polyisocyanates do. It would have been obvious to use some trifunctional polyol per the teachings of Szycher because abrasion properties are important for golf balls. It would have been obvious to include another diol because Wu discloses that two diols can be used (col. 4, line 10).
